

# David Bowie, færnibilið og menntun

Tækni- og Hugverkæping SI 13. október 2017

Hrund Gunnsteinsdóttir, þróunarfræðingur og stjórnarformaður TBS

**4.01 THE MOST DANGEROUS THING ON EARTH (AND THE MOST BEAUTIFUL).** This graph (made in November 2003 by The Opté Project) makes visual our radical new possibility for knowledge. The project's founder, Barrett Lyon, chief technology officer for California-based DigiDefense International, wrote a software program with the capacity to map the entire Internet in a single day, by a single computer. The collected information provides an analysis of wasted Internet Protocol (IP) space, maps IP distribution, and detects the results of natural disasters, weather, and war. The latest research shows that the known Internet is growing by more than 10 million new, static pages each day. The effect is the global accumulation of knowledge over time and the ever-increasing value of search engines like Google.

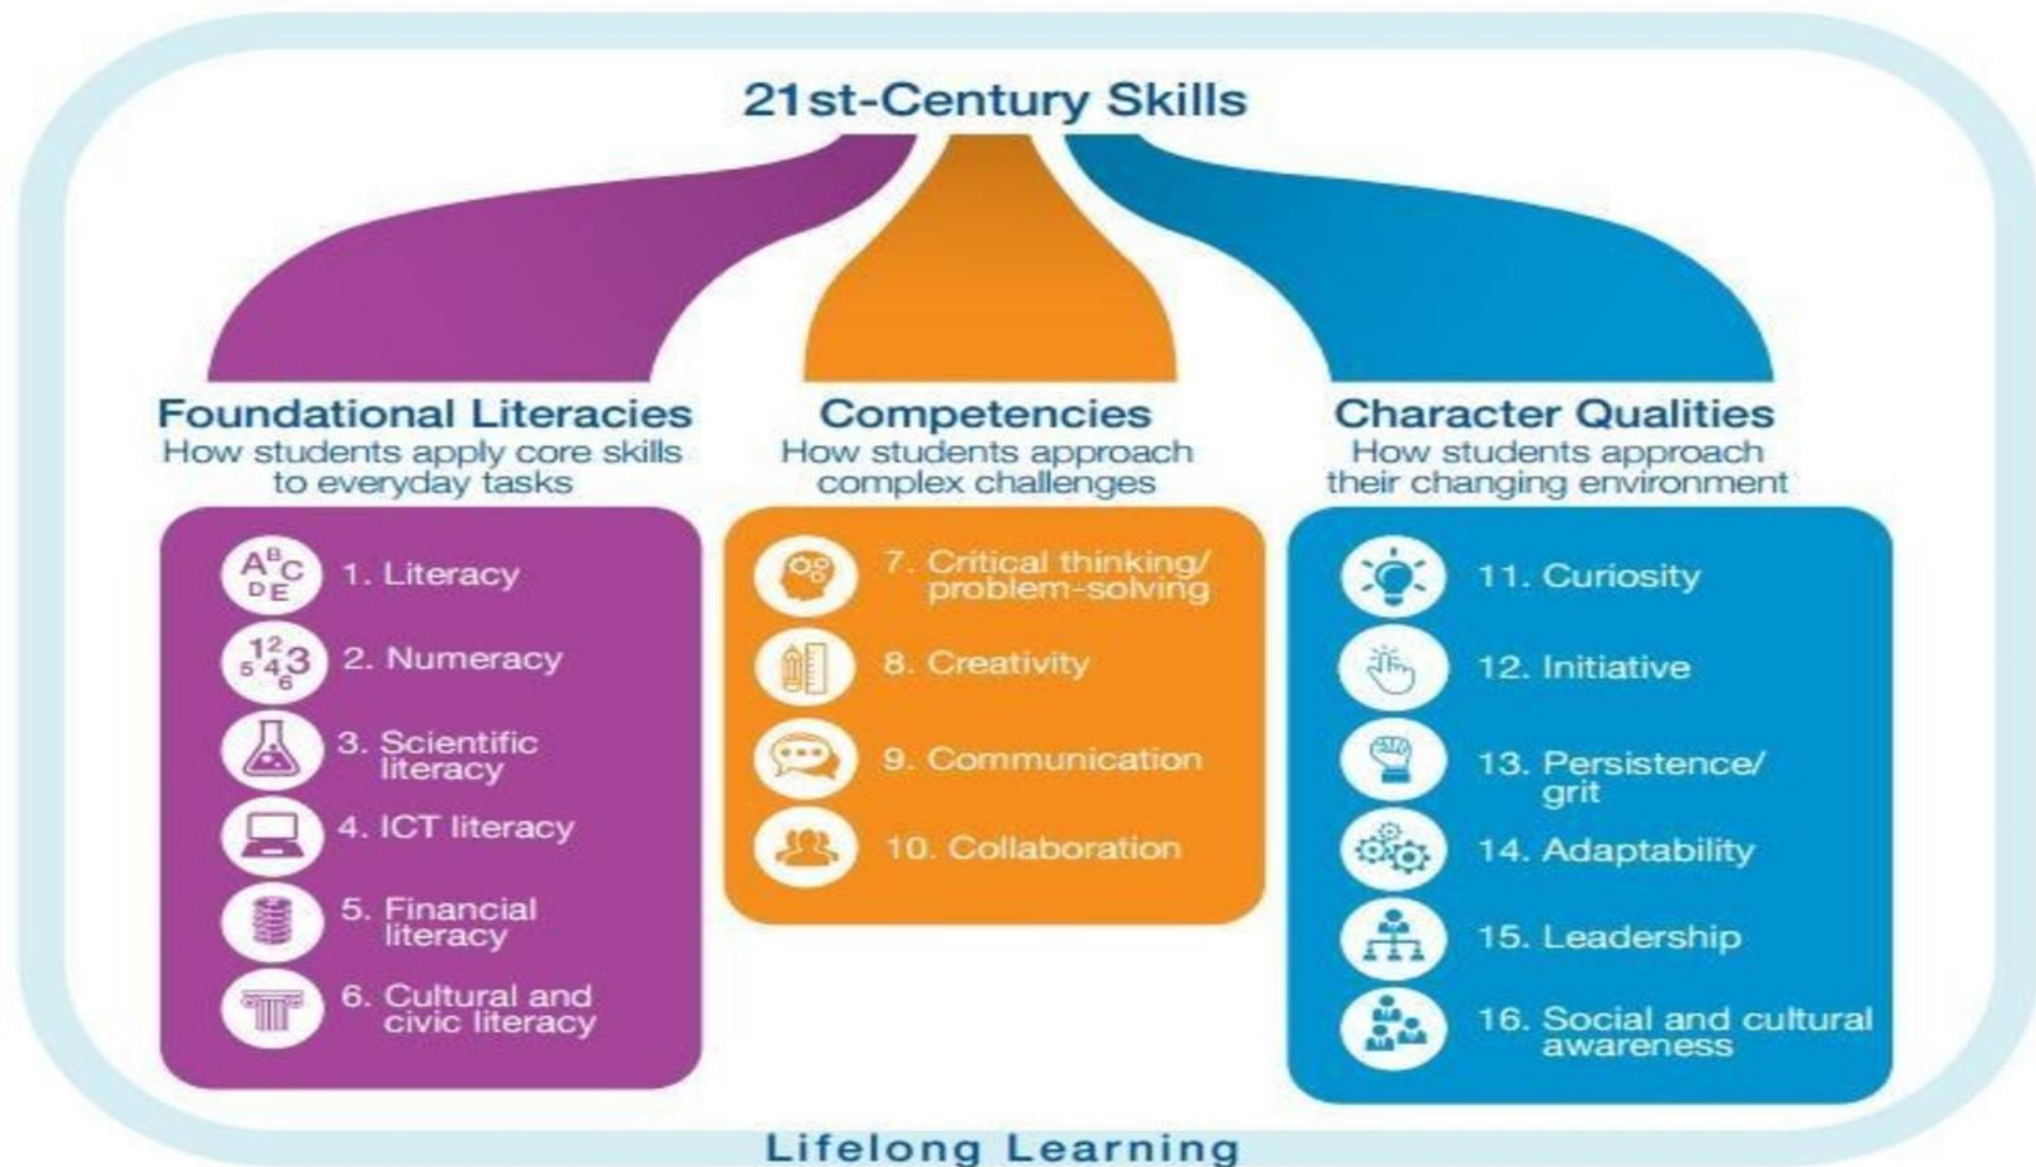

**Yuval Noah Harari:**

**"We had better understand what is happening and make up our minds about it before it makes up our minds for us."**

# What skills will be needed most?

Exhibit 1: Students require 16 skills for the 21st century

Note: ICT stands for information and communications technology.
